

Smart Parking

LoRa® APPLICATION BRIEF

DESCRIPTION

Up to 30% of traffic congestion in urban areas is linked to drivers circling to find parking space. By implementing a smart parking solution comprised of sensors and gateways embedded with LoRa® Technology and an intelligent low-power, wide area network based on the LoRaWAN™ protocol, cities can help improve traffic in urban centers, reduce unnecessary pollution and increase city revenue.

HOW A LoRaWAN-BASED SMART PARKING SYSTEM WORKS

Semtech LoRa Technology enables connectivity, real-time analytics, reporting, and additional functions such as geolocation.

- 1 Sensors embedded with LoRa Technology are placed in parking spots throughout the city
- 2 Sensors send status of parking spaces available to a gateway
- 3 Gateway sends information to the network where the data is analyzed by an application server
- 4 Application server provides open spot parking information to parking garages or drivers via computer or mobile device

BENEFITS

- Increase revenue for cities using a sensor-based system to identify and ticket parking violations and adapt pricing on city meters based on demand
- Reduce city congestion by using sensors and gateways embedded with LoRa Technology to let drivers know where to find open parking
- Easy to set up since battery-operated sensors do not need to be connected to a power source — an entire structure can be equipped in less than a day
- Keeps maintenance costs low as low power operation ensures sensor batteries can last up to 20 years
- Reliable RF communication link between sensing infrastructure and LoRaWAN-based network provides excellent coverage, including underground parking garages

APPLICATIONS

Cities and parking garage owners increase revenue and improve service through:

- Smart parking meters on city streets
- Smart parking garages that display open parking spots

KEY FEATURES OF SEMTECH'S LoRa WIRELESS RF TECHNOLOGY

- LONG RANGE** Penetrates in dense urban and deep indoor environments, connecting to sensors 15-30 miles away in rural areas
- LOW POWER** Enables multi-year battery lifetime of up to 20 years or more
- HIGH CAPACITY** Supports millions of messages per base station
- GEOLOCATION** Enables tracking applications without GPS or additional power consumption
- STANDARDIZED** LoRaWAN specification ensures interoperability among applications, IoT solution providers and telecom operators
- SECURE** Embedded end-to-end AES-128 encryption of data ensuring optimal privacy and protection
- LOW COST** Reduces upfront infrastructure investments, as well as operating and end-node costs

JUMP-START YOUR IoT DEVELOPMENT TODAY

Semtech offers several training options to help you get started:

-  Learn about Semtech's LoRa Technology platform: visit www.semtech.com/loT
-  Join the LoRa Community: <https://semtech.force.com/lora>
-  Become a member of the LoRa Alliance™: visit www.lora-alliance.org
-  Attend a LoRa Boot Camp for a full-day of training featuring LoRa Technology and real world applications: www.semtech.com/loT
