Smart Parking

DESCRIPTION
Up to 30% of traffic congestion in urban areas is linked to drivers circling to find parking space. By implementing a smart parking solution comprised of sensors and gateways embedded with LoRa® Technology and an intelligent low-power, wide area network based on the LoRaWAN™ protocol, cities can help improve traffic in urban centers, reduce unnecessary pollution and increase city revenue.

HOW A LoRaWAN-BASED SMART PARKING SYSTEM WORKS
Semtech LoRa Technology enables connectivity, real-time analytics, reporting, and additional functions such as geolocation.

1. Sensors embedded with LoRa Technology are placed in parking spots throughout the city
2. Sensors send status of parking spaces available to a gateway
3. Gateway sends information to the network where the data is analyzed by an application server
4. Application server provides open spot parking information to parking garages or drivers via computer or mobile device

BENEFITS
- Increase revenue for cities using a sensor-based system to identify and ticket parking violations and adapt pricing on city meters based on demand
- Reduce city congestion by using sensors and gateways embedded with LoRa Technology to let drivers know where to find open parking
- Easy to set up since battery-operated sensors do not need to be connected to a power source — an entire structure can be equipped in less than a day
- Keeps maintenance costs low as low power operation ensures sensor batteries can last up to 20 years
- Reliable RF communication link between sensing infrastructure and LoRaWAN-based network provides excellent coverage, including underground parking garages

APPLICATIONS
Cities and parking garage owners increase revenue and improve service through:
- Smart parking meters on city streets
- Smart parking garages that display open parking spots

Semtech Products used in this application:
Sensors
- SX1272/3
- SX1276/7/8/9
Gateway
- SX1201

All application elements (sensing modules, gateways, servers, software) are available through LoRa Alliance® partners.

KEY FEATURES OF SEMTECH’S LoRa WIRELESS RF TECHNOLOGY

- **LONG RANGE**: Penetrates in dense urban and deep indoor environments, connecting to sensors 15-30 miles away in rural areas
- **LOW POWER**: Enables multi-year battery lifetime of up to 20 years or more
- **HIGH CAPACITY**: Supports millions of messages per base station
- **GEOLOCATION**: Enables tracking applications without GPS or additional power consumption
- **STANDARDIZED**: LoRaWAN specification ensures interoperability among applications, IoT solution providers and telecom operators
- **SECURE**: Embedded end-to-end AES-128 encryption of data ensuring optimal privacy and protection
- **LOW COST**: Reduces upfront infrastructure investments, as well as operating and end-node costs

JUMP-START YOUR IoT DEVELOPMENT TODAY

Semtech offers several training options to help you get started:

- Learn about Semtech’s LoRa Technology platform: visit www.semtech.com/IoT
- Join the LoRa Community: https://semtech.force.com/lora
- Become a member of the LoRa Alliance™: visit www.lora-alliance.org
- Attend a LoRa Boot Camp for a full-day of training featuring LoRa Technology and real world applications: www.semtech.com/IoT
- Follow Semtech on LinkedIn and our LoRa Showcase page
